Ease of Use

The screenshot displays the Kolab Enterprise web interface. At the top, the 'KOLAB ENTERPRISE' logo is on the left, and the user email 'greve@kolabsys.com' is on the right. Below the header is a toolbar with icons for Refresh, Compose, Reply, Reply all, Forward, Delete, Archive, Mark, and More. A sidebar on the left shows a file explorer with folders like 'ietf.org', 'kde.org', 'kolab.org', 'announce', 'commits' (652), 'devel' (94), 'format', 'users' (447), and 'de' (65). Below the sidebar is a 'TAGS' section with labels: CorplD, Unvention, UCS, MindMap, LHM, Important, Security, and Business. The main area shows a list of email threads. The selected thread is 'Upgrade Notes from Kolab 3.3 to 3.4' from 'kolab_mailing_list@evenat.eu' dated 'Tue 01:33'. Below the list, the email content is displayed, starting with 'Hello,' and discussing an error in the upgrade process. The email text includes: 'I don't know how I should contact, but on web page "Upgrade Notes from Kolab 3.3 to 3.4" (<https://docs.kolab.org/administrator-guide/upgrading-from-kolab-3.3-to-3.4.html#etc-imapd-conf>) I think there is an error: it should be `tls_ca_file --> tls_client_ca_dir` instead of `tls_ca_file --> tls_server_ca_file`. See: <https://docs.cyrus.foundation/imap/release-notes/2.5-current.html#option-name-changes-for-tls>. + I would suggest to state more clearly that wallace service should be restarted with "service wallace restart" even if we don't use "wallace for resource management". I've been stuck not being able to send & receive mails until I manually restart wallace service (server restart didn't solve the issue)'. On the right side of the interface, there is a vertical menu with icons and labels: MAIL, ADDRESS BOOK, CALENDAR, HELP, FILES, NOTES, TASKS, SETTINGS, and LOGOUT.

Upgrade Notes from Kolab 3.3 to 3.4
From kolab_mailing_list@evenat.eu Date Tue 01:33

Hello,

I don't know how I should contact, but on web page "Upgrade Notes from Kolab 3.3 to 3.4" (<https://docs.kolab.org/administrator-guide/upgrading-from-kolab-3.3-to-3.4.html#etc-imapd-conf>) I think there is an error:

it should be

`tls_ca_file --> tls_client_ca_dir`

instead of `tls_ca_file --> tls_server_ca_file`

See: <https://docs.cyrus.foundation/imap/release-notes/2.5-current.html#option-name-changes-for-tls>

+ I would suggest to state more clearly that wallace service should be restarted with "service wallace restart" even if we don't use "wallace for resource management". I've been stuck not being able to send & receive mails until I manually restart wallace service (server restart didn't solve the issue)
