Harsh	Kothari	Workshop of 1 hour	Basic of MediaWiki Gadgets and Extension making	This workshop is actually an effort to make you realize how much magic you can do with JavaScript, CSS, PHP for Wikipedia which is basically uses MediaWiki software! We know that how Wikipedia is involve in our day to day life. So that user experience is very fundamental thing for readers as well as editors. At the end of this workshop people will be easily able to hack wikipedia using front end and backend technologies and enhance user experience both for their reading and editing purpose. I plan to cover some basics of JavaScript, Gadgets, MediaWiki environment. This workshop is basically divided into two parts. In the first part I will explain basic about MediaWiki Gadgets with live hands on session. In the second part I will introduce how to create extension for MediaWiki with some examples and live demo. So at the End of this workshop people will get knowledge about the technologies behind the MediaWiki Gadgets and Extension and they can also start contributing to MediaWiki / Wikipedia by using this knowledge.
Ningxin	Hu	Workshop of 1 hour	Crosswalk, your top-notch HTML5 WebView for Android	HTML5 has been adopted by many developers for its advantages such as straight-forward integration with cloud services, flexible layout with responsive design, and cutting edge technologies such as WebRTC, WebGL, and Canvas. However, using the latest web standards has been challenging on Android because the ecosystem is heterogeneous and fragmented with various versions in use. Deploying on popular but dated Android versions such as 4.0 is often complicated, as the integrated WebView may have performance limitations and is lacking important features. Application authors are then restricted to the smallest common featureset. With Crosswalk, a Chromium-based HTML5 framework developed by Intel, those limitations can be overcome. Crosswalk offers you a way to bundle the Chromium web engine with your app and deploy it across all Android 4.x versions. On top of solving portability issues, Crosswalk adds features (SysApps and Presentation API, SIMD, Manifest support) and optimizations for web app developers. During the presentation we will demonstrate how easy it is to package and deploy your application on Android and how well existing tools such as Cordova works with Crosswalk. Come and find out how your HTML5 applications can run better than ever on Android.

Eng Klat	Lim	workshop of 1 hour	Introduction to Drupal	Drupal is often misunderstood as hard to use, difficult to understand and many traditional developers are not aware of where to begin. This workshop aims at helping people to get started with Drupal by explaining some of the basic concepts and sharing of use cases.  In this workshop, I will run through some use cases of Drupal and go into detail about why it was being use, how it benefited the use case. I will also walk through with participants on how they can get started with their first Drupal website.  At the end of the workshop, participants will better understand the value of Drupal in the whole CMS eco-system, and when is a good time to consider using Drupal for their projects.
