Kolab is the comprehensive solution that enables collaboration across all platforms and with great ease. Based on a micro service architecture, it can integrate into environment or cloud strategy, and is the only solution of its kind that was built for highest levels of security from the ground up thanks to its origins with the German Federal Office for IT Security. It's use cases range from self-hosting on a Raspberry Pi to multiple data centres serving millions of users with advanced Audit, eDiscovery and Data Loss Prevention (DLP) scenarios. Kolab is also available as Kolab Now, a public service similar to Google Apps or Hotmail.com, but hosted in Switzerland under enhanced privacy provisions for professionals who cannot afford to compromise the data and

Project Atomic hopes to temper innovation with better management and control, and it's not alone: CoreOS, Docker's suite of enterprise products, and most recently, Ubuntu's Ubuntu Core all hope to capture this market. But what is the market? Is container technology the best plan for DevOps and an increasingly cloud-oriented

	4:10 PM	Rasmus	Skjoldan	ТҮРОЗ	Talk	Designing a new content management system poses a beautiful problem: How do you design a tool you don't know the exact future use of?	In the TYPO3 Neos open source project, the team turned to urban planning principles to look for answers. The UX planning and UI design of this brand new CMS from the international open source community, TYPO3, drew inspiration from principles that are second nature to masterplanning architects, yet little known to designers and developers. On a research trip across Europe, UX Lead Rasmus Skjoldan met with an urban planning architect working for the Greater London Authority and discovered how principles such as inclusiveness, regeneration, transport-driven development, wayfinding, livability, private & public space could be applied when designing a state-of-the-art open source CMS. Rasmus will explain how to work with what he calls "UX infrastructure", letting you plan how changes can flow through interfaces and user experience strategies—whether you are working with CMSs or any other type of rapidly changing design project.	
	4:30 PM	Michael	Mudd	The Open Computing Alliance	Talk	Cloud and Open Standards	Cloud and Open Standards' - Open Standards are critical to enable interoperability, included services hosted and delivered in the Cloud. The International Standards Organisation (ISO) indicate that globally there are more than 18,000 companies that have achieved the ISO27001 certificate in Information Security Management. On July 30th 2014 an additional voluntary standard within the 27000 series, ISO/IEC 27018 was adopted specifically governing the processing of personally identifiable information (PII) by public Cloud Service Providers (CSP). ISO/IEC 27018 is the first open international privacy standard for the cloud. This new standard incorporates controls that reflect PII considerations specifically for cloud services, and will help a CSP demonstrate that its cloud privacy policies and practices are robust, and in line with best industry practices. This presentation will discuss the standards and why it is important.
